

Para Image™

Aluminum I - Custom

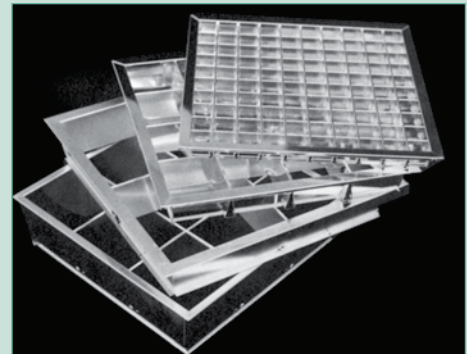

The Para Image Aluminum Louver-Series I allows the use of parabolic aluminum louvers to be design-oriented and creative. No longer is the architect or designer forced to use one or two standard depths and cell sizes. These are custom made to your specifications, so you can let the creativity flow.

Cell Size: The cell size can vary from 1 1/2" to 8" or larger and cell depth can vary between 3/4" to 4".

Note: .75" and 1.55" cell depth are standard choices and pricing is more attractive as a result. (See below for the Para Image Aluminum II - Custom when ordering .75" and 1.55" cell depth material)

Panel Size: 1'x4', 2'x2', 2'x4', 4'x4', or other sizes available on request.

Finishes: Specular gold, specular silver, semi-specular gold, semi-specular silver, full range of enamel colors or anodized options.

Para Image™

Aluminum II - Custom

The Para Image Aluminum Louver-Series II is designed as a standardized custom product by manufacturing the 2 most common cell depth dimensions of .75" or 1.55" in high quantities. This allows us to offer very attractive pricing on a customized product using this material with your choice of cell size and spacing .

Cell Size: The cell size can be varied from 1 1/2" to 8" or larger.

Panel Size: 1'x4', 2'x2', 2'x4', 4'x4', or other sizes available on request.

Finishes: Specular gold, specular silver, semi-specular gold, semi-specular silver, full range of enamel colors or anodized options.

As with all custom and semi-custom products, you need to speak to one of our sales consultants to obtain pricing or place an order.
